The Ozias-Akins Biotechnology Lab (http://oziasakinslab.org/) seeks a creative and productive postdoc to work on genome editing in legumes to modify reproductive and seed quality traits. The applicant will be expected to participate in multiple facets of the legume (peanut and cowpea) breeding and biotechnology programs related to the overall goals of the projects.

**Education and Experience**
- PhD in plant development or breeding-related field
- Lab and research knowledge and skills
- Excellent oral and written communication skills
- Proven publication record

**Knowledge and Skills**
- Ability to work independently as well as an integral member of a team
- Knowledge of and experience with plant and bacterial genetic engineering as well as molecular genetics and bioinformatics are essential
- Experience with gene-editing and legume tissue culture systems preferable

**Location** – The University of Georgia Tifton Campus, Tifton, GA 31793, NESPAL

The position is available 01 March 2020

For more information on position, contact Peggy Ozias-Akins, pozias@uga.edu. Application materials should include curriculum vitae, cover letter, and contact information for three references.
